

# Building simple webpages

#### Introduction

You know a few HTML tags, so it's time to make your first page! Let's get started right away.

**Activity Checklist** 

Follow these INSTRUCTIONS one by one

<b>✓</b>	<b>Activity Checklist</b>
1.	Open a text editor.

2.	Open the <code>about_me.html</code> file. It contains only a little bit of
	HTML code to get you started, but you will write the rest
	yourself.

#### Step 2: Make a page about yourself

About mistakes

Mistakes often happen. It's very easy to make them in HTML because you have to remember to close each tag, and the opening and closing tag are slightly different. Let's try making some mistakes to see how browser tries to make sense of our code even if we haven't written it perfectly.

## Activity Checklist

1. Let's pick the list of things we like as an example. One of the mistakes that happen often is forgetting the closing tag, so let's remove the 
to see how it affects the page. Save the file and refresh it in the browser.

What happened? Some things below the list moved a little bit to the right. If you inspect the page with X-Ray Goggles you can see that things which followed the list now nest inside it, which is why they have moved to the right. After we removed the closing tag the browser simply doesn't know the list of items has ended.

1	Add the closing		taa back in	n and save	it Now	when you
Τ.	riad inc clocking	\/ UI/	Tag back ii	I dila dave	11. 14077	Wilch Jou

2. Tags need them. Wh +Find the	ne page the rest of tags and to be spelt correctly for lat would happen if we miss <a href="https://www.his.com/his.co&lt;/th&gt;&lt;th&gt;pelt something?&lt;br&gt;to &lt;d1&gt;. Save the&lt;/th&gt;&lt;th&gt;&lt;/th&gt;&lt;/tr&gt;&lt;tr&gt;&lt;td&gt;can no longer &lt;sup&gt;-&lt;/sup&gt;&lt;/td&gt;&lt;td&gt;&lt;/td&gt;&lt;td&gt;n't know what you mean by&lt;br&gt;so it doesn't use a larger te&lt;/td&gt;&lt;td&gt;_&lt;/td&gt;&lt;/tr&gt;&lt;tr&gt;&lt;td&gt;2. Find one of tag name&lt;/td&gt;&lt;td&gt;&lt;pre&gt;cd1&gt; back to &lt;h1&gt; and sa of the &lt;img&gt; tags. We've j  and the browser wasn't su e misspell the attribute?&lt;/pre&gt;&lt;/td&gt;&lt;td&gt;just tried misspelling the&lt;/td&gt;&lt;td&gt;&lt;/td&gt;&lt;/tr&gt;&lt;tr&gt;&lt;td&gt;Inside &lt;img&gt;&lt;/td&gt;&lt;td&gt;tag we have the src and&lt;/td&gt;&lt;td&gt;alt ottributes:&lt;/td&gt;&lt;td&gt;&lt;/td&gt;&lt;/tr&gt;&lt;tr&gt;&lt;th&gt;&lt;img src=" ki<="" th=""><th>itten.jpg" alt="This is a</th><th>kitten." /&gt;</th><th></th></a>	itten.jpg" alt="This is a	kitten." />	
_	ging src to something else the browser.	e. Save the document and		
for the picture		rowser no longer knows who		
2. Now remo	back to src so we can keep the second quote (") e: the one after the text, second re="this"	from the alt attribute of so you end up with this:		

3. Save it and refresh in the browser.	
The next tag disappeared. Why? The browser will think that everything alt=" and before the next quote (") is the additional text for this i including the end of the image tag and the next opening tag.	
1. Fix it again by adding a quote after the alt text.	
We've made some common mistakes together, and sometimes a simple might make the browser struggle to understand what we mean. But me the time it will try to show us something anyway, so when we've change header tag to something else it didn't understand this piece of text wheading, but it still showed us the text. So it's a little bit understanding some mistakes can make it very confused.	nost of ed the as a
Step 3: Create another page and link to it	
Step 3: Create another page and link to it  Let's create another page. Open <code>about_me_page_2.html</code> . It has a little code than the last page you were working with, but I'm sure you can thow to add new tags by now.

Let's create another page. Open <code>about_me_page_2.html</code> . It has a little code than the last page you were working with, but I'm sure you can thow to add new tags by now.  Some hints and ideas:  Add a heading that will serve as the title of this page.  You could make this page about your pet, your favourite hobby or you and their hobbies.	figure out

a specific id within a page, like this:

```
<a href="#kitten">Click to see a kitten</a>
```

Which then took you to something like this:

```
<div id="kitten">
     <img src="kitten.jpg" alt="This is a kitten." />
</div>
```

To link to another page, we don't need to include the hash symbol (#), but instead we need to say which file we would like the link to take us to.

So to link from about\_me\_page\_2.html to about\_me.html write it like this:

```
<a href="about_me.html">Go to About Me page</a>
```

You can change the link text to something else, like the page title if you have changed it.

To link back from <code>about\_me.html</code> to <code>about\_me\_page\_2.html</code> you would have to write it like so:

```
<a href="about_me_page_2.html">Go to my second page</a>
```

Congratulations! You have made your own website.

### Putting your website on the web (extra activity)

Now you have made your own site, you want to show it off, am I right?

If you simply copied the address of the web page from your browser and then sent it to someone, they wouldn't see it. That's because this address describes a place on your computer, and your friends don't have access to it. Even of they did, what if they wanted to look at it when your computer wasn't turned on?

Remember servers from the first session? Servers are computers that are always on and connected to the internet, and they are set up so people can visit websites that live on those computers.

To do that we will use Cyberduck - it's a program for moving files from your computer to a server.

Click Open Connection.
igspace Add the server name, user name and password as instructed by the CodeClub
volunteer.
Click Connect. You will then see all the folders and files on the server - most
likely the server will be empty, as you haven't added your files yet.
Drag your website files from your computer into your server window. The
uploading will begin.
Once uploaded, you can visit your website at the address given to you by the
CodeClub volunteer.
